

## LOCKDOWN ACTIVITIES

## ‘I created various eco-friendly things out of waste materials’

I love to conserve environment and Mother Earth so for that I recycled newspaper to create my jewellery while being at home during the Covid-19 lockdown.

Recycling and reusing the waste material helps us create fantastic and usable products. Rather than dumping these waste materials in landfills, we can put together various innovative and creative ideas to create something new and useful.

During the lockdown period, I thought I should create something unique and environment-friendly so I tried my hands on creating beautiful newspaper jewellery with the help of my mother. I was able to make various things like fans using old newspapers and waste paper cuttings.

In addition, I also made thermocol cups, skirt and many more like belt, bracelets, earrings, necklace, tiara, fan etc.

I also utilized my time in acquiring knowledge about plantation like when I should water the plants and how I should take care of them. I also planted seeds of tomato, coriander and brinjal and now I water them

each day and see them grow. It is really fun.

I also spent a lot of time with my grandparents, playing ludo and carom board and learning about our solar system, constellations and much more. Though it's scary to recall how we managed to come this far in the Covid-19 times but I enjoyed my time with my lovely family.
